Summary

Hi, I'm **Kasinadh Sarma** — a Software Engineer with a B.Tech in Cyber Security, specializing in **Application Security (AppSec)** and **DevSecOps** within production web environments. Proven ability to integrate security into the SDLC by **hardening API routes**, enforcing strict **secrets hygiene** in CI/CD pipelines, and maintaining **zero-vulnerability dependencies**. Experienced in securing **headless CMS** architectures, integrating payment gateways (**Razorpay**) with robust input validation, and implementing safe file-handling practices for medtech (**ROPODS**) and AI platforms.

Skills

Security & AppSec — API Hardening | Input Validation | Secrets Hygiene | Dependency Auditing | RBAC

Cloud & DevSecOps — GCP | Firebase Security Rules | Vercel | GitHub Actions CI/CD Security

Languages — Python | TypeScript | Dart | Bash

Frontend & Backend — Next.js | React | Node.js | REST APIs

AI/ML Security — Memory-Safe Preprocessing | Secure Data Ingestion (TensorFlow, OpenCV)

Tools — Git | Linux | VS Code

Professional Experience

Junior Engineer, *ROPODS (Medtech Startup)*

06/2025 – Present

- **E-Commerce Security & API Hardening:** Secured the shop.ropods.com storefront and **Razorpay** payment integration; engineered internal API routes with rigorous **input validation** and **Role-Based Access Control (RBAC)** checks, preventing injection vulnerabilities and securing **100% of checkout flows**.
- **Bot Mitigation & Endpoint Security:** Engineered a **dual-layer CAPTCHA** system across all public-facing endpoints (Contact Us, Book Demo) on the corporate site. Integrated **Google reCAPTCHA v3** alongside a custom **math-based logic challenge** to effectively thwart **automated bot attacks**, form spam, and **abuse vectors**.
- **DevSecOps & CI/CD:** Architected secure **Next.js** deployment pipelines on **Vercel** via **GitHub Actions**; enforced strict **environment-scoped secrets management** and tightened **.env/deployment-key** handling, eliminating **credential exposure** risks across production environments.
- **Dependency Auditing:** Drove continuous static analysis (**SAST**) and dependency auditing across corporate and e-commerce properties, maintaining a baseline of **zero known high-severity CVEs** in `node_modules` and resolving **100%** of security-related TypeScript/ESLint errors.
- **Protocol Research:** Conducted research on **UCP (Universal Commerce Protocol)** and **ACP (Agentic Commerce Protocol)** to improve **product-to-platform communication** standards across **ROPODS'** web and device integrations.

Projects

CIELON, *Freelance Client Project*

- **Backend Architecture:** Architected the secure backend infrastructure for a greenfield **Next.js 16** storefront from scratch, enforcing strict **TypeScript type-safety** across all server-side functions to prevent runtime **injection attacks** and secure **API endpoints**.
- **Content Synchronization Pipeline:** Built a secure backend content synchronization pipeline between **Sanity Studio** and **Firestore**; implemented a **custom read cache** alongside strict **Firebase Security Rules** to prevent unauthorized **data mutations** and block **unauthenticated API access**.
- **Security Documentation:** Authored comprehensive backend **security architecture** documentation and database schema designs, focusing on **data confidentiality** and **Zero Trust principles** to keep **Firestore** strictly isolated from **client-side manipulation**.

Training & Internships

Summer Trainee, *Intel Unnati*

05/2023 – 07/2023

Focused on secure implementation of AI/ML computer vision pipelines.

- **Computer Vision Pipeline Development:** Built an AI-powered road object detection system using **OpenCV**, implementing **memory-safe image preprocessing** and strict input validation to mitigate **buffer overflows** and **adversarial input vectors**, handling them safely.
- **Secure Data Ingestion:** Designed secure data ingestion architectures for large-scale **TensorFlow** datasets, ensuring **data integrity, confidentiality, and tamper-proofing** throughout the model training lifecycle.

Education

B.Tech in Computer Science and Engineering (Cyber Security), Parul University
CGPA: 7.46

11/2020 – 03/2024

Certifications

- **TryHackMe Sec0 Certification** – Issuer: TryHackMe
- **Google Cloud Skills Boost** – Issuer: Google Cloud
- **Google Professional Cyber Security** – Issuer: Credly
- **Cybersecurity Roles, Processes & Operating System Security** – Issuer: Coursera, IBM
- **Introduction of IoT** – Issuer: NPTEL
- **Introduction to Programming Using Python** – Issuer: HackerRank
- **Networking Basics** – Issuer: Cisco
- **Networking Devices and Initial Configuration** – Issuer: Cisco

Declaration

I hereby declare that the information provided in this resume is true and accurate to the best of my knowledge and belief.

Place: Bengaluru
